Heavy Demolition / Ft. Eustis Building 811 Dormitory

Cleared for Repurposed Area - On Time

Heavy Demolition

Details:

- Owner: Air Force
- General Contractor: JW Clark Enterprises
- Project Name: Building 811
- Location: Fort Eustis, Newport News

Description:

This 3 story concrete structure served as barracks for members of the United States Army. It was located less than 100 feet away from another occupied barracks that frequently had troops active outside for training. Safety was a top priority for the Macsons crew. Successfully there were no injuries or accidents throughout the entire project. Select demolition and abatement crews worked to strip the building of all non-recyclable, and asbestos containing materials in order for the heavy demolition to be successful in its process. Multiple excavators and processors were used to complete the task, including the huge, 90 ton Komatsu 800pc machine. Using this enabled Macsons to reach the 3rd floor, daily increasing the efficiency of demolition. The project was finished safely and on time.
